

SYNTHETIC PATIENT CHART - DEMO ONLY, NOT A REAL PATIENT

Patient: Jane A. Sample DOB: 03/14/1961 (age 65)

MRN: DEMO-000123 Date of visit: 2026-06-02

Diagnosis: Pure hypercholesterolemia (ICD-10 E78.00)

History of atherosclerotic cardiovascular disease (ASCVD):

- Myocardial infarction 2023-11, status post coronary stent.
- Prescriber confirms patient is at high risk for a further ASCVD event.

Lipid-lowering therapy history:

- Atorvastatin 80 mg daily (high-intensity) since 2025-09-15, ongoing.
- Ezetimibe 10 mg daily added 2026-01-10.

Most recent lipid panel (2026-05-02, on maximally tolerated statin):

- LDL-C: 162 mg/dL

Plan: LDL-C remains well above goal (≥ 70 mg/dL) despite high-intensity atorvastatin plus ezetimibe. Initiate evolocumab (Repatha) 140 mg SC q2wk.

Patient is not on any other PCSK9 inhibitor, inclisiran, or alirocumab.

Prescriber: Dr. M. Rivera, Cardiology
